SUMMARY

AI engineer at Bizora Media Networks (Fast Company India). In my first week I rebuilt the company's website, and it has already brought in its first two clients. I'm now replacing its paid awards platform with an in-house system, including RAG-assisted judging, for 1,000+ award registrations. Outside work I've shipped five open-source AI projects you can run today, including a LangGraph agent that needs a human's approval before risky actions, a hybrid-search RAG with its own evaluation suite, and a semantic cache that answers repeat questions in 84 ms instead of 34 s. MSc in Advanced Computer Science with AI from the University of Strathclyde. A background in UI/UX and data means I build the whole product, not just the model call.

PROFESSIONAL EXPERIENCE

Web and AI Engineer, Bizora Media Networks Pvt. Ltd. (Fast Company India) | *Sep 2026 – Present*

- Rebuilt the company's main website in 7 days, replacing a version that had taken 2 months to build. Leadership signed it off straight away, and it has already brought in the company's first 2 clients.
- Building an in-house awards platform for the Most Innovative Companies (MIC) awards to replace OpenWater, removing a paid licence that starts at $5,100 a year.
- Automated the flow for 1,000+ registrations: entries land as clean, Excel-exportable records and applicants get automatic confirmation emails, so nobody re-keys or tidies data by hand.
- Building a RAG-assisted judging system that scores each entry against the judging criteria and the evidence it submitted, doing the first-pass review that would otherwise need a full judging panel.
- Maintain the Bizora and Fast Company India websites and shipped the group's first microsite.

UI/UX Intern, CMS Info Systems Ltd | *Navi Mumbai, India* | *Mar 2026 – Sep 2026*

- Redesigned the HAWKAI web application end to end, from the login page to the dashboards, for CMS's AI video-surveillance product.
- Designed the security-management dashboard that lets operators watch live camera feeds across multiple sites from one screen.
- Ran usability reviews using heuristic evaluation and flow mapping, working in Agile sprints with developers so designs stayed realistic to build.

Events Team Leader, Edinburgh International Conference Centre | *Edinburgh, UK* | *Jan 2024 – Dec 2024*

- Led a crew of 7–8 across around 20 international conferences, acting as the main client contact on event days and resolving escalations under pressure.
- Reviewed post-event feedback to find recurring service gaps and fed the fixes into planning for the next event.

Data Analysis Intern, Binex Controls | *Pune, India* | *Dec 2022 – Jul 2023*

- Cleaned and prepared datasets in Python (Pandas, NumPy), fixing missing values and inconsistencies before analysis.
- Presented findings monthly to non-technical stakeholders and worked with developers to feed results into internal tools.

PROJECTS

Agent Orchestrator | *Python, LangGraph, Claude API, FastAPI, PostgreSQL*

- Multi-step AI agent that plans, acts and checks its own work, but needs a human's approval before any risky action runs.
- Every decision goes to a replayable PostgreSQL audit log. Served through FastAPI with 19 passing tests and a demo mode that needs no API key.

ragstar: Hybrid Search RAG | *Python, Ollama, vector search, BM25, reranking*

- Fully local RAG that combines vector and keyword search with reranking, and answers with clickable citations.
- Refuses questions its documents can't answer, and is scored on retrieval, faithfulness, correctness and refusal against an 18-question golden set.

Agent Evals | *Python, Claude API, PostgreSQL, k-means clustering*

- Catches regressions in new versions of an AI agent, using the agent's real conversation logs as test data.
- Clusters prompts with k-means, has Claude write golden answers and rubrics, then scores each version 1 to 5 on correctness, groundedness and safety.

Jericho: Live AI Agent Dashboard | *Claude Code, Three.js, JavaScript*

- Live 3D dashboard showing which of 30 Claude Code skills is running, what it's working on and how far along it is.
- Driven by a Claude Code hook that records each skill's start and finish. Ships as one HTML file with no install or build step.

Semantic Cache | *Python, FastAPI, FAISS, Claude API*

- Answers repeat or reworded questions in 84 ms instead of 34 s by serving cached Claude API answers from a vector index, with a 64% hit rate on a 50-prompt benchmark.
- Covered by 25 tests.

SKILLS

AI and LLMs: LLM application development, AI agents and tool use, RAG, LangGraph, Claude API, Ollama (local models), prompt engineering, LLM evaluation

Backend: Python, FastAPI, REST APIs, PostgreSQL, SQL, Docker, Git, pytest

Frontend and Design: React, JavaScript, HTML/CSS, Three.js, Figma, UI/UX design, usability testing

Data: Pandas, NumPy, Scikit-learn, Matplotlib

Ways of Working: Agile/Scrum, stakeholder communication, team leadership

EDUCATION

MSc Advanced Computer Science with Artificial Intelligence, University of Strathclyde | *Glasgow, UK* | *Jul 2025*

BSc Computer Science, Savitribai Phule Pune University | *Pune, India* | *2019 – 2022*

Relevant coursework: Data Structures, Algorithms, Machine Learning, Statistical Analysis, Database Systems

Secondary Schooling, Saint Ursula's High School | *Pune, India*

VOLUNTEERING

Data Volunteer, Umbrella Health Partnership (Birmingham City Council Youth Service) | *Aug 2023 – Present*

- Built the organisation's first data system, turning paper records into a clean, structured dataset leadership could actually use.
- Ran quarterly analysis on it, surfacing trends and gaps that informed programme planning.
